

**Amendments to the Claims:**

This listing of claims will replace all prior versions, and listings, of the claims in the application:

**Listing of Claims:**

1. (Canceled).
2. (Currently amended) An enclosure as claimed in claim 4 12, wherein at least one of ~~either~~ the frame portion and the main enclosure portion is electronically continuous and ~~is~~ preferably integrally formed.
3. (Currently amended) An enclosure as claimed in ~~any preceding~~ claim 12, wherein at least one of ~~either~~ the frame portion and the main enclosure portion ~~comprise~~ includes an electromagnetic radiation absorbent ~~and/or reflective~~ material.
4. (Currently amended) An enclosure according to ~~any preceding~~ claim 12, wherein the frame portion is conductive.
5. (Currently amended) An enclosure as claimed in ~~any preceding~~ claim 12, wherein the ~~first~~ main enclosure portion ~~comprises a~~ includes the projection, the projection having ~~one or more~~ a plurality of apertures through which connection to the ~~connection means~~ connector ~~can be~~ is made.
6. (Currently amended) An enclosure as claimed in ~~any preceding~~ claim 12, wherein the ~~first~~ main enclosure portion is conductive.
7. (Currently amended) An enclosure as claimed in ~~any preceding~~ claim 11, wherein the ~~connection means~~ connector is adapted for connection to at least one of a cable, a power source, and an antenna feed ~~or the like~~.
8. (Currently amended) An enclosure as claimed in ~~any preceding~~ claims 11, wherein the ~~connection means~~ connector comprises at least one solder tab.

9. (Currently amended) An enclosure as claimed in ~~any preceding~~ claim 11, wherein the ~~electronic~~ circuit board is operable at least one of ~~either~~ ~~an~~ RF or microwave frequencies frequency.

10. (Currently amended) A An enclosure as claimed in claim 11, wherein the electronic device is an intruder detection device, preferable a motion detector, for intentionally radiating electromagnetic radiation of a selectable frequency said motion detector comprising an enclosure according to any preceding claim for suppressing frequencies other than said selectable frequency.

11. (New) An enclosure for an electronic device having a circuit board comprising:  
a first enclosure portion having a wall forming a recess;  
a second enclosure portion joined to the first enclosure portion to form a chamber to house a connector of the circuit board in the recess to suppress the emission of unwanted radiation from within the enclosure; and  
a projection extending from at least one of the first enclosure portion and the second enclosure portion, the projection having at least one aperture to receive a feed to establish a connection to the connector.

12. (New) An enclosure as claimed in claim 11, wherein the first enclosure portion is a frame portion and the second enclosed portion is a main enclosure portion.

13. (New) An enclosure as claimed in claim 12, wherein at least one of the frame portion and the main enclosure portion includes an electromagnetic radiation reflective material.

14. (New) An enclosure for a circuit board comprising:  
a frame including a wall defining a recess;

a housing assembly joinable to the frame to define a chamber in which the circuit board is located; and

a projection extending from the housing assembly and having an aperture to receive a feed to establish an electrical connection to a connector of the circuit board, the projection and the recess forming an extension chamber in which the connector is located to suppress the emission of unwanted radiation from the chamber.
